Parallel Columns

left column content

- right column content

Table

Customer / Source	Arnhem [euro/ton]	Gouda [euro/ton]	Demand [tons]
London	n/a	2.5	125
The Hague	1.4	0.8	200
Supply [tons]	550 tons	700 tons	n/a

Citations and Math

- We can cite papers inline (Lundberg & Lee, 2017) using `[@name]`, based on the contents of `refs.bib`
- Math will be rendered nicely, i.e. $y = f(x; \theta)$ to $y_1 - y_2 = f(x_1, x_2; \theta)$

Further Examples

Figures, References, Title-less Slides

(Figure 1) - an existing approach formalized into an easy-to-use, reliable, and correct implementation. `fastprop` is highly modular for seamless integration into existing workflows and includes and end-to-end Command Line Interface (CLI) for general use.

Figure 1: `fastprop` logo.

Formatted Code

We can show code beautifully like this:

```python
from py2opsin import py2opsin

smiles_string = py2opsin(
  chemical_name = "ethane",
  output_format = "SMILES",
)
```
